CD40104BMS, CD40194BMS

CMOS 4-Bit Bidirectional Universal Shift Register

December 1992

Features

- **High Voltage Type (20V Rating)**
- **Medium Speed fCL = 12MHz (typ.) at VDD = 10V**
- **Fully Static Operation**
- **Synchronous Parallel or Serial Operation**
- **Three State Outputs (CD40104BMS)**
- **Asynchronous Master Reset (CD40194BMS)**
- **5V, 10V and 15V Parametric Ratings**
- **Standardized Symmetrical Output Characteristics**
- **Meets All Requirements of JEDEC Tentative Standard No. 13B, "Standard Specifications for Description of 'B' Series CMOS Devices"**

Applications

- **Arithmetic Unit Bus Registers**
- **Serial/Parallel Conversions**
- **General Purpose Register for Bus Organized Systems**
- **General Purpose Registers**

Description

The CD40104BMS is a universal shift register featuring parallel inputs, parallel outputs, SHIFT RIGHT and SHIFT LEFT serial inputs, and a high impedance third output state allowing the device to be used in bus organized systems.

In the parallel load mode (S0 and S1 are high), data is loaded into the associated flip-flop and appears at the output after the positive transition of the CLOCK input. During loading, serial data flow is inhibited. Shift right and shift left are accomplished synchronously on the positive clock edge with serial data entered at the SHIFT RIGHT and SHIFT LEFT serial inputs, respectively. Clearing the register is accomplished by setting both mode controls low and clocking the register. When the output enable input is low, all outputs assume the high impedance state.

The CD40194BMS is a universal shift register featuring parallel inputs, parallel outputs SHIFT RIGHT and SHIFT LEFT serial inputs, and a direct overriding clear input. In the parallel load mode (S0 and S1 are high), data is loaded into the associated flip-flop and appears at the output after the positive transition of the CLOCK input. During loading, serial data flow is inhibited. Shift right and shift left are accomplished synchronously on the positive clock edge with data entered at the SHIFT RIGHT and SHIFT LEFT serial inputs, respectively. Clocking of the register is inhibited when both mode control inputs are low. When low, the $\overline{\text{RESET}}$ input resets all stages and forces all outputs low. The CD40194BMS is similar to industry types 340194 and MC40194.

The CD40104BMS and CD40194BMS series types are supplied in these 16 lead outline packages
