

CD4015BC

Dual 4-Bit Static Shift Register

General Description

The CD4015BC contains two identical, 4-stage, serial-input/parallel-output registers with independent "Data", "Clock," and "Reset" inputs. The logic level present at the input of each stage is transferred to the output of that stage at each positive-going clock transition. A logic high on the "Reset" input resets all four stages covered by that input. All inputs are protected from static discharge by a series resistor and diode clamps to V_{DD} and V_{SS} .

Features

- Wide supply voltage range: 3.0V to 18V
- High noise immunity: $0.45 V_{DD}$ (typ.)
- Low power TTL: Fan out of 2 driving 74L compatibility: or 1 driving 74LS
- Medium speed operation: 8 MHz (typ.) clock rate
- Fully static design: @ $V_{DD} - V_{SS} = 10V$

Applications

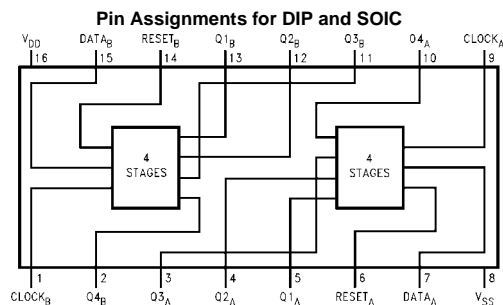

- Serial-input/parallel-output data queueing
- Serial to parallel data conversion
- General purpose register
